Feeding Directions:

Reptiles typically consume 1 - 4% of their body weight per day. Use as a guideline to determine the amount of feed to offer per day or every other day. Feed intake may vary depending on environmental conditions, activity, and life stage. Food can be offered dried or softened with water. To soften with water, mix 1-part warm water with 2-parts food. Allow approximately 5 minutes for food to hydrate and drain excess water. Place food in a large, shallow feeding dish. Remove uneaten food daily.

Handling Instructions:

Washing hands with soap and water is recommended after handling reptile foods.

Not for human consumption.
