

MYCO Advantage™

Advanced Mycorrhizal Fungal Technology

Beneficial soil organisms can be destroyed or depleted over time, often as a result of increasing environmental stress and construction techniques. This can result in lifeless, compacted soil.

The micro-organisms in MYCO Advantage™ correct this by attaching to the emerging seed roots, helping the turf grow a denser, deeper root system. The result is a healthier, thicker turf that utilizes available nutrients, fertilizer, atmospheric carbon and water more efficiently...

THE WAY NATURE INTENDED.

Reduces:

- Drought stress
- Water requirements
- Fertilizer requirements
- Transplant shock
- Soil Erosion

Improves:

- Seed establishment
- Water & nutrient uptake
- Root growth
- Salt tolerance
- Drought tolerance
- Carbon sequestration

Cross-section of Roots

with MYCO Advantage™
wt: 3.1 grams

without
wt: 1.4 grams
