

ODOR ABSORBENT MICRO CRYSTALS

LitterPearls® Micro Crystals Odor Free Technology

The microscopic channels in the LitterPearls® Micro Crystals lock in the odor molecules and in a few minutes allows the moisture, without the odor, to evaporate so the micro crystals are ready to absorb more urine over and over again for a whole month. LitterPearls® Micro Crystals also dries solid waste, thus reducing odor and making scooping much easier.

7 lbs. of LitterPearls® Micro Crystals provides the equivalent of 56 lbs. of scoopable litter and 80 lbs. of traditional clay litter.

1. FILL

Each month fill your clean litter box 1.5–2 inches deep with LitterPearls® Micro Crystals cat litter.

2. LIFT-OUT

Remove and dispose of solid waste daily. Rake the micro crystals so the crystals are properly aerated and evenly distributed.

3. MAINTAIN

Add more micro crystals to maintain original depth. Replace micro crystals when they no longer control urine odor.

Soft on Paws & Low Tracking.

Superior Odor Control.

Fragrance Free.

70% Less Landfill Contribution.

Less to Dispose. Change Monthly.

Cat Safe & Cat Preferred.

Non-Allergenic & Low Dust.

Inhibits Bacterial Growth.

Cat Safe, People Safe, Earth Safe!

Made with all natural materials: sand, oxygen, and water. No minerals, no chemicals, and no crystalline silicate, which means no danger to pets!

Encouraging your cat to use an indoor litter box, or properly disposing of outdoor feces, is beneficial to overall water quality. Please do not flush cat feces in toilets or dispose of outdoors in gutters or storm drains. Do not dispose of entire litter box contents through the toilet or septic systems, as it will clog pipes.

Most cats don't mind the different texture, but you may want to mix some of your cat's previous litter with LitterPearls® Micro Crystals on the first use.

To reduce tracking litter outside the box, we recommend a piece of carpet or a litter mat be placed at the litter box exit.

Note: Properly dispose of used cat litter and keep away from children. Particularly pregnant women and immunosuppressed persons should remember that cat feces can sometimes transmit a disease called toxoplasmosis. Always wash your hands after handling used cat litter. Unused litter poses no toxoplasmosis threat.
