Pennington Mealworms are an excellent high-protein food source for many wild birds. They are a high-energy treat that will attract many species of birds that are difficult to attract with traditional seed blends. In addition, they are an important source of food for baby birds. Mealworms can be used alone in a feeder or mixed with your favorite wild bird food.

**QUALITY:** Our mealworms are oven dried for the best quality and are also preservative & additive-free, ensuring a nutritious and healthy high-energy feed.

**GO GREEN!** We have chosen a package that is more environmentally friendly than conventional plastic containers. This package represents 70.8% less packaging weight than ordinary plastic containers (110 grams). And the packaging is significantly less bulky in transportation of the greenhouse gaseesand fuel in transportation of the filled or unfilled packages.

Enjoy the wonder of wild bird feeding by offering Pennington Mealworms to those special hard-to-entice songbirds. You can feel good doing your part to support nature and to help preserve our world, too.
