ADVANCED  
ORAL CARE

...because the LOVE for  
your dog is serious

Preventative dental care may  
reduce your dog's risk of  
developing oral disease.  
Establishing a daily routine  
of proper dental care  
helps maintain oral health.

**EASY DIRECTIONS**

- Begin by letting your dog taste a small amount of tasty Nylabone® Dental Toothpaste. Using your finger, gently rub teeth and gums in a circular motion.
- Then introduce the toothbrush or finger brush with a small amount of toothpaste.
- Allow your dog to taste, then gently start brushing with a back & forth motion. No rinsing is necessary.
